

One Iranian 15-kiloton Nuke with an 8-Mile "Kill Radius"

According to a 2002 Washington State "Nuclear Weapon Detonation" "Fact Sheet 320-088" a 10-kiloton nuclear blast with "secondary radiation" would kill everyone within "6 miles (9600m)" http://www.doh.wa.gov/Portals/1/Documents/Pubs/320-088_nucwpdet_fs.pdf. Therefore, a crude "Little Boy" Gun-Type Hiroshima 15-kiloton nuclear weapon will kill everyone within 8 miles. Therefore, any nuclear bomb landing in the Gush Dan Israeli dense population center will kill about 3 million Israelis, and destroy its industrial base.
